

An Internship Report
Of
Codec Technologies – Web Development Internship

Submitted
To
School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech (Computer Science and Engineering – AIML)

By
Roll Number of Student: 25SCS1003003127
Name of Student: **AVANISH SINGH**
Semester: 3rd Semester
Batch: 2026-2027

CANDIDATE'S DECLARATION

I, AVANISH SINGH, do hereby declare that the internship report titled “Web Development Internship at Codec Technologies Pvt. Ltd.” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering (AIML). All the references have been quoted and I have not taken as such any material from any other source. I affirm that this report is my own and has not been submitted to any other institute for any degree/diploma requirement, and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature:- 

Student Name: AVANISH SINGH

Roll No.: 25SCS1003003127

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I would like to thank Codec Technologies Pvt. Ltd. and the National Internship Portal (AICTE) for providing me the opportunity and the structured platform to learn and gain hands-on exposure in the domain of Web Development. I am also thankful to my institute, IILM University, Greater Noida, and the faculty of the School of Computer Science and Engineering for their continuous support and encouragement.

I would also like to thank my assigned project guide and mentor at Codec Technologies for their patience in clarifying doubts and reviewing my weekly progress, which helped me steadily build confidence in web development concepts over the course of the internship.

Finally, I express my heartfelt gratitude to my parents and friends for their constant encouragement and blessings.

3. INTERNSHIP CERTIFICATE

INTERNSHIP OFFER LETTER

INTERNSHIP OFFER LETTER

Dear Avanish Singh,

We are pleased to offer you a 1 Month Internship as Project Intern at Codec Technologies, a global platform dedicated to empowering learners and connecting diverse talent to create meaningful career opportunities worldwide. Codec Technologies delivers dedicated IT and business consultancy services across 27+ countries, empowering global innovation and strategic growth.

Internship Details:

- Designation : Web Developer Intern
- Location & Mode: Pan India, Hybrid
- Duration : 25/07/2026 to 25/08/2026
- Reporting to : Assigned Project Head(s)

This program provides an immersive experience, enabling you to gain industry-level knowledge and acquire valuable skills. Exceptional interns may also qualify for a scholarship award based on weekly performance reviews conducted by project supervisor.

If you accept this offer and the terms above, please complete your assigned projects and training tasks on our platform and via email.

Best regards,

Sincerely,

Dr. Anurag Shrivastava,
Codec Technologies India
NCS ID: E19E86-0116588288923
Date Of Issue - 25/07/2026

Dr. Anurag Shrivastava
Talent Acquisition Manager

4. PROJECT DESCRIPTION

4.1 Introduction

This report presents a detailed account of the 1-Month Virtual/Hybrid Internship undertaken as a “Web Developer Intern” at Codec Technologies Pvt. Ltd., an AICTE & ICAC approved internship program registered on the National Internship Portal. The internship was carried out from 25 July 2026 to 25 August 2026 as part of the requirement of the Bachelor of Technology (Computer Science and Engineering – AIML) programme at IILM University, Greater Noida.

Web development was chosen as the area of specialization for this internship because it offers a practical, visible way to apply programming concepts and directly connects classroom learning in programming and data structures with an in-demand industry skill set. The internship was designed to take a learner with basic programming knowledge and progressively build their ability to design, style, script, and eventually connect a working web application to a back end and a database.

The primary aim of this internship was to build a strong foundation in Web Development – starting from HTML, CSS and JavaScript fundamentals, moving through responsive design and front-end frameworks, into back-end development, APIs and web services, and finally into project deployment and building a complete, responsive web application.

The internship followed a structured, week-wise curriculum delivered through video-based modules combined with reading material, covering four weeks of learning along with a dedicated industrial project. On successful completion of all the requirements, an Internship Completion Certificate was awarded by Codec Technologies Pvt. Ltd. under the patronage of AICTE and the National Internship Portal.

This report is organized to first introduce the host organization, then state the problem addressed by the internship, followed by the objectives, scope, tools used, system architecture, week-wise methodology, a description of the project work undertaken, the expected outcomes, and finally the certificates and communication proof that support the completion of the internship.

4.2 Organization Profile

Codec Technologies Pvt. Ltd. is an ISO 9001:2015 certified global platform dedicated to empowering learners and connecting diverse talent to create meaningful career opportunities worldwide. Codec Technologies delivers dedicated IT and business consultancy services across 27+ countries, empowering global innovation and strategic growth.

As a Google for Education partner, Codec Technologies runs AICTE and ICAC approved virtual/hybrid internship programs registered under the National Internship Portal, offering structured, industry-aligned learning pathways in domains such as Web Development, Artificial Intelligence, Data Science, and Android Development. The organization pairs its video-based curriculum with an assigned project guide for each intern and tracks progress through a dashboard-based completion tracker, which allows both the intern and the organization to monitor week-wise progress against the program schedule.

For this internship, the assigned designation was “Web Developer Intern” under the Pan India, Hybrid mode, with the intern reporting to an assigned Project Head for guidance on tasks, doubt resolution, and evaluation of the final project.

4.3 Problem Statement

Although a large number of engineering students learn the theoretical foundations of web technologies during their academic coursework, very few get structured, hands-on exposure to the complete web development workflow – from designing and structuring a webpage, to styling and making it responsive, to adding interactivity with scripting, to connecting a front end with a back end and a database.

In the absence of a guided, project-based curriculum, students often learn individual concepts such as HTML tags or CSS properties in isolation, without understanding how these pieces fit together into a deployable web application. The problem addressed by this internship was to practically learn and apply this end-to-end web development workflow – from static page structure to a working, styled, and interactive web application – within a structured, industry-mentored program.

4.4 Project Objectives

- To understand the foundations of web development, including HTML, CSS and JavaScript.
- To learn responsive design techniques for building websites that work across devices.
- To gain exposure to front-end frameworks used in modern web development.
- To understand the basics of back-end development.
- To learn how APIs and web services are used to connect front-end and back-end systems.
- To write clean and maintainable code, including correct use of HTML semantic tags.
- To learn how to build a responsive website using Bootstrap.
- To understand the process of project deployment for a web application.
- To build and deploy a complete web application incorporating all the learned concepts.
- To successfully complete all four weeks of the internship curriculum, the Industrial Project, and claim the Internship Certificate.

4.5 Scope of the Project

The scope of this internship spans the foundational web-development workflow – starting from HTML, CSS and JavaScript basics, moving to responsive design and front-end frameworks, extending into back-end development, APIs and web services, and finally covering clean code practices, Bootstrap-based responsive design, and deployment of a complete web application.

The internship was limited to a structured, module-based learning environment provided by Codec Technologies Pvt. Ltd., and did not involve deployment on any live organizational production system. The application built as part of the internship project was intended as a learning exercise and a demonstration of the concepts covered, rather than a production-grade commercial product. Within this scope, emphasis was placed on writing clean, readable code, following consistent naming conventions, and structuring project files in a maintainable way.

4.6 Technologies and Tools Used

The following technologies, languages, and tools were used over the course of the internship:

- Markup & Styling: HTML, CSS
- Scripting: JavaScript
- Responsive Design: Media queries, mobile-first layout techniques
- Front-End Framework: Bootstrap
- Back-End Development: Server-side fundamentals and back-end concepts
- Integration: APIs and Web Services
- Deployment: Project deployment tools and practices
- Learning Platform: Codec Technologies structured video-based learning modules

4.7 System Architecture

The general learning architecture followed during the internship can be summarized in the following layers:

- Foundation Layer: HTML fundamentals, CSS basics and JavaScript basics used to structure and style web pages.
- Responsive Layer: Responsive design principles applied so pages adapt correctly across screen sizes and devices.
- Framework Layer: Front-end frameworks, including Bootstrap, used to accelerate and standardize UI development.
- Back-End & Integration Layer: Back-end development concepts combined with APIs and web services to connect client and server.
- Deployment Layer: Clean, maintainable code and project deployment practices used to ship a complete, working web application.

The internship followed a structured, week-wise methodology, summarized in the table below.

Week	Module	Description
1	Foundations and Basics	HTML Fundamentals, CSS Basics and JavaScript Basics, covering the core building blocks used to structure, style and add interactivity to web pages.
2	Advanced Concepts and Frameworks	Responsive Design for building layouts that adapt to different devices; Front-End Frameworks for standardized UI development; Back-End Development fundamentals.
3	Advanced Topics and Deployment	APIs and Web Services connecting front-end and back-end systems; Project Deployment; Clean and Maintainable Code & view tag; building a responsive website using Bootstrap; building and deploying a complete web application incorporating all the learned concepts.
4	Project	Industrial Project applying all concepts learned across the previous three weeks, followed by claiming of the Internship Certificate.

Note: The course was completed to 100% of its total content at the time of reporting, spanning all four weeks of the curriculum along with the Industrial Project, as reflected in the completion tracker screenshots attached in Section 4.11.

4.9 Project Work

The final week of the internship curriculum was structured around an Industrial Project, in which the concepts covered across the first three weeks – HTML, CSS and JavaScript fundamentals, responsive design, front-end frameworks, back-end development basics, APIs and web services, and clean, deployable code practices – were expected to be brought together into a single, working web application.

As reflected in the completion tracker in Section 4.11, the Industrial Project module of the curriculum was marked complete as part of the internship requirements, and the Internship Certificate was subsequently claimed on this basis. A detailed, project-specific write-up (covering the exact application built, its features, and the individual implementation steps) has not been included in this report and can be added separately once that project work is finalized.

4.10 Expected Outcomes

- Ability to explain the foundational concepts of web development, including HTML, CSS and JavaScript.
- Practical understanding of responsive design techniques for multi-device layouts.
- Exposure to front-end frameworks and their role in modern web development.
- Understanding of back-end development fundamentals.
- Ability to use APIs and web services to connect front-end and back-end components.
- Ability to write clean, maintainable code following good semantic HTML practices.
- Ability to build a responsive website using Bootstrap.
- Understanding of the project deployment process for web applications.
- A completed set of week-wise learning modules covering all four weeks of the internship curriculum, along with the Industrial Project and the claimed Internship Certificate.

4.11 Certificates of Completion and Communication Proof

The Internship Offer Letter and the Internship Certificate issued by Codec Technologies Pvt. Ltd., confirming the 1-Month Web Developer Internship, are attached in Section 3 of this report. The course completion tracker from the internship learning portal, showing 100% progress across all four weeks of the curriculum, is attached below as further proof of completion.

Fig 4.11.1: Course tracker – Overview, Generate Offer Letter, and Week 1 (Foundations and Basics).

Fig 4.11.2: Course tracker – Week 2 (Advanced Concepts and Frameworks).

Fig 4.11.3: Course tracker – Week 3 (Advanced Topics and Deployment).

Fig 4.11.4: Course tracker – Week 4 (Project) and Claim Internship Certificate.

5. CONCLUSION

The one-month internship as a Web Developer Intern at Codec Technologies Pvt. Ltd. provided a structured and practical introduction to the end-to-end process of building a web application. Starting from the basics of HTML and CSS, progressing through responsive design and JavaScript-driven interactivity, and finally touching upon back-end and database connectivity concepts, the internship offered a well-rounded view of what it takes to design, build, and refine a working website.

Beyond the technical skills gained, the internship also helped in developing habits useful for any software project – planning a page or feature before coding it, testing across different screen sizes, structuring code for readability, and following clean, deployable coding practices. The Industrial Project component of the curriculum served as a practical checkpoint intended to tie together the concepts learned across all four weeks.

Overall, the internship met its stated objectives and has strengthened the foundation needed to take up more advanced front-end and back-end web development topics in future coursework and projects.
